DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 5, 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Rink, USP 5,842,265 (of record).

The cited reference teaches the claimed method of manufacturing a composite article comprising providing two sheets 4,5 within a mold 1, and closing mold 1 within aligned openings 6 and 9 of sheets 4,5 such that the edges of the openings are bent or deformed by the mold. Plastic is injected and is fixedly attached to the edges. See col. 2, lines 45-60.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3, 4, 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rink, USP 5,842,265 (of record).

The cited primary reference substantially teaches the basic claimed method of manufacturing a composite article comprising providing two sheets 4,5 within a mold 1, and closing mold 1 within aligned openings 6 and 9 of sheets 4,5 such that the edges of the openings are bent or deformed by the mold. Plastic is injected and is fixedly attached to the edges. See col. 2, lines 45-60.

The cited primary reference does not teach the edges having a bead configuration or a tab as claimed.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to so form the edges in any number of conventional configurations as such is well within the level of ordinary skill in the art and would result in an equivalent sheet material. Note that figures 2 and 3 depict the metal sheets 4,5 as overlapping and abutting, with one peripheral section extending past the other. It would have further been obvious to so include tab portions for forming an interlocking fit with the injected plastic material.
